Taylan Öztürk

PROFILE

An enthusiastic character significantly passionate about his skills and developing himself embracing the profound philosophy of chess in his life. Programming has been a longstanding one of his major passions since childhood as he never gave up on learning new and improving himself in programming despite juggling numerous responsibilities in terms of particularly school. Programming and chess aside, martial arts is another big enthusiasm and inspiration.

PROJECTS

tic-tac-toe
A minimax algorithm implemented tic tac toe app built with React.

realtor-site
This project, in which I made a personal website for my real estate agent neighbor, is also the first time I made money by programming.

verbingo
Verbingo is a little minigame to help you learn how to conjugate verbs in Turkish. At the same time, it is a project I did as an end-of-term assignment from the Turkish Language and Literature lecture.

turkish-literature-calendar
The Turkish Literature Calendar is actually a web application containing a calendar allowing users to highlight specific days based on their interests and view them nicely. With this application, users can easily determine which days are significant for them and view. The why this project is named Turkish Literature Calendar is that I've developed this project for my teacher's project in the school so we use this with the purpose of Turkish Literature.

toal-website
A website that I made for my school's podcast organization.

botinstein
A Discord bot made with Discord.js for my school's Discord channel.

SKILLS

- Python
- PyQt5
- Django
- JavaScript
- ReactJS
- NextJS
- HTML & CSS
- Tailwind CSS
- Boostrap
- DiscordJS
- ExpressJS
- NodeJS
- Rust
- Linux

LANGUAGES

Turkish
Native

English

voltran-math
As the captain and programmer of my school's FLL (first-lego-league) team, I developed a tool for our innovative project aimed at finding ways to save unnecessary energy used by street lamps that remain lit at night. This tool will assist us in performing the necessary calculations for our project. The FLL team is an extracurricular activity in which I participate and Voltran is the name of the team.

whatsapp-cli
A command line interface for helpful whatsapp-web operations like scheduling messages and so on.

cboard
A simple CLI tool helping users copy what they need such as github tokens, google passwords and etc

INTERESTS

Chess
I'm literally a chess lover. Chess is art. Chess is science. Chess is philosophy. Chess is life. Chess is everything!

Music
I don't produce music for now but listen to so much. With that being said, I think, I really have a good taste of music. I absolutely adore the mesmerizing melodies and captivating harmonies crafted by the criminally underrated bands Shamrain, Anathema, and Thurisaz.

Martial Arts
I've never had professional education in martial arts, but I've been training myself for years. The IP Man movie series has had a profound impact on my inspiration, particularly in Chinese Martial Arts since my childhood. I greatly admire the way they not only teach self-defense techniques but also impart pivotal life lessons and philosophies.

English
In general, learning languages appeals to me. I've loved English from a very young age and have tried to improve myself. Even though I earned a C2 certificate from my course, from my point of view, it is more appropriate to describe myself at C1 level.

CERTIFICATES

FLL Tournament
First-Lego-League 19th season Izmir High School Local Tournament

English C2
(The link to the certificate is going to be added soon)
